

Lymphology

Based on many years experience and a unique competence, BSN medical is able to offer its customers all necessary products for management of lymphoedema. A whole range of bandages, padding products, custom made and Ready-To-Wear products are offered for effective and reliable lymphoedema therapy. Our products are designed with the Patient and the Therapist in mind to offer a comprehensive range of compression products in combination with the MLD (Manual Lymph Drainage) therapy.

Our products include:

- **JOBST® Elvarex®** compression garments are available in various compression classes and different styles to perfectly meet patients' individual requirements. These garments help maintain the reduced volume and shape of the limb and inhibit further fluid accumulation. Custom-Made and Ready-To-Wear Compression Garments: help maintain the reduced volume and shape of the limb. These garments help to inhibit further fluid accumulation and help to assure therapeutic results achieved by compression. Elvarex compression garments are indicated when decongestion is achieved so the garment helps prevent an increase in the extremity dimensions.
- **JOBST® Ready-To-Wear Armsleeve and Gauntlet:** worn together or separately help maintain the limb size of lymphoedema patients. These comfortable garments provide gradient compression to assist in patient management following trauma, surgery or radiation therapy.
- **JOBST® LymphCARE Kit** Bandaging system is designed to allow the optimal management of edema. These bandage system is generally used before wearing a compression garment, helping to reduce swelling and stabilize the size of the limb before being measured and fit for the JOBST® compression garment.
- **Artiflex®** Non-Woven Padding , **JOBST® foam**, **Comprifoam®** paddings
