Specialist® Plaster of Paris
Designed for use with the Ponseti Technique

Does not require soaking off the night before
Extra fast setting time
**Specialist® Plaster of Paris**

**Designed for use with the Ponseti Technique**

Specialist® extra fast setting plaster of Paris is ideally designed for orthopaedic professionals who use the Ponseti method of treating children with club foot. Specialist® plaster of Paris will ensure maximum patient comfort with positive clinical outcomes during the treatment of clubfoot.

The Ponseti technique was developed by Professor Ignacio Ponseti at the University of Iowa, USA. The technique aims to reduce the need for extensive surgery through manipulations and casting, followed by boots with a bar.

**Easy to remove**
- able to remove quickly and as pain free as possible - using the Specialist® ‘soaking technique’ (figures 1–6)
- minimises the need for a noisy cast saw

**Extra fast setting time - sets within minutes**
- minimises the period when casts may be vulnerable to distortion
- minimises the time the child is under stress during application

**Easy to apply and highly mouldable**
- provides an excellent fit around a child’s lower limb
- enables gentle manipulations and maintenance of the correct position

**Provides a strong cast**
- ideal for a wide range of applications, especially the Ponseti technique

**The plaster has ‘low crumble’**
- reduces the need for overcasting - important for older children

**Low plaster loss**
- formulated to keep the plaster on the roll, where you need it - not in the wrapper or in the dip bucket

**Made from specially treated plaster**
- spreads uniformly
- bonds firmly to the fabric
- ensures the same consistency every time

**Available in a wide range of sizes with moisture proof packaging**
- protects and prolongs the product life

---

**Specialist plaster of Paris will not need soaking off the night before**

1. Bathe the child for 2-5 minutes whilst in clinic

2. Concentrating on sections gently score the plaster

3. Then peel off

4. Repeat sections 2 and 3

5. Gently cut through the undercast padding with plaster scissors along the scored line

6. Remove the plaster cast
